EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Keith Baxter on June 21, 2004.

The application has been amended as follows:

Replace the abstract with:

A multi-shot injection mold utilizes a minimum of a first shot cavity and a second shot cavity for receiving injected molded plastic to produce a completed multi-component product. In conventional two shot molding, the injection of molten resin, cooling time of such resin, transportation of product to subsequent position and ejection of completed product requires a restrictive sequence. The invention uses a three position/station concept which allows each position to act independently of each other. The independent positions allow injection of first shot, injection of second shot and ejection of finished product to occur simultaneously. Additionally, due to independent control of the three positions, the invention allows the ability to delay the ejection of finished product until after the injection of the subsequent first and second shot, thereby affording additional cooling time prior to ejection of the finished product.

2. The following is an examiner's statement of reasons for allowance:

The prior art fails to teach a multi-shot mold having a first and second shot cavity, indexing plate, ejector station, wherein the ejector station provides a stripper plate separate from the indexing plate to remain rotationally fixed during rotation of the indexing plate, the stripper plate engaging a molded part at the ejection station to remove the molded part, and wherein the stripper plate is a cradle that grips a side of the molded part along an axis of movement perpendicular to a plane of rotation of the indexing plate and then moves along the plane of rotation to eject the part. The closest prior art, Schad, fails to teach the stripper plate being separate from the indexing plate to remain rotationally fixed during rotation of the indexing plate and to engage the molded part along an axis of movement perpendicular to a plane of rotation of the indexing plate.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

3. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Emmanuel S. Luk whose telephone number is (571) 272-1134. The examiner can normally be reached on Monday-Thursday 7 to 4 and alternate Fridays.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Wanda L. Walker can be reached on (571) 272-1151. The fax phone
